env zero (env0) · Team Lead, Atlas

Apr 2024 – Present
Remote

CloudQuery and env zero merged in Mar 2026

Lead the Atlas team at env zero. Before the merger, led CloudQuery's Integrations team, responsible for the open-source CLI, the plugin SDK and the plugins built on it.

Team Lead, Atlas · Mar 2026 – Present

- Lead a team of four engineers that takes on projects across the whole env zero codebase rather than owning one area of the product.
- Build and tune the AI coding agents the team uses day to day, and review the code they produce.
- Mentor engineers on the team, take part in hiring and share the on-call rotation.

Team Lead, Integrations · CloudQuery · May 2024 – Mar 2026

- Joined in Apr 2024 as a Senior Software Engineer on the Framework and Plugins team and took over as team lead in May 2024. The team was later renamed Integrations.
- Led a team of four engineers responsible for building and supporting CloudQuery's plugins.
- Mentored engineers, took part in hiring and shared the on-call rotation.
- The team owned its features from idea through implementation to monitoring and worked closely with the solutions team.
- Lead maintainer of CloudQuery's open-source CLI, plugin SDK and code generator (6.5k+ GitHub stars).
- Built new source plugins for Wiz, Tenable and Plaid in response to customer demand.
- The team's partner validation with Wiz, Tenable and Snowflake led to listings on their marketplaces.
- The team ran an in-house Kubernetes operator that schedules syncs and manages their lifecycle.
- Extended the core SDK with per-table sync usage tracking and support for additional data types.
- Added resources and fixed bugs across the AWS, GCP, GitHub and Snyk plugins.

Kubeshop · Senior Cloud Engineer

Dec 2022 – Mar 2024
Remote

Ran the infrastructure for Monokle Cloud, and designed and built its authentication, microservices and GraphQL APIs.

- Cut cloud costs by more than 60% while applying standard security and reliability practices.
- Set up OAuth 2.0 and OpenID Connect: deployed and configured a self-hosted authorization server and implemented the Authorization Code, Client Credentials and Device Code flows.
- Built a high-throughput API that streams repositories from GitHub, GitLab and Bitbucket, through their APIs or over SSH or HTTPS.
- Wrote the GitHub Actions workflows, Helm charts and Kustomizations deployed with Argo CD for end-to-end CI/CD.
- Cut build times by more than 80% and image sizes by an order of magnitude with GitHub Actions concurrency and caching, multi-stage Docker builds and distroless images.
- Was on call for production.

Bitdefender · Staff Engineer

Oct 2018 – Dec 2022
Iași, Romania

Worked on Console, an internal platform that took developers' and ML researchers' code from build through testing and staging environments to production, across multiple Kubernetes clusters on public and private clouds.

- **Staff Engineer** · Apr 2021 – Dec 2022
- Senior Cloud Engineer · Oct 2018 – Apr 2021

- Wrote Kubernetes operators for RabbitMQ, Prometheus and the Elastic Stack, covering HA clustering, sharding and similar operations, so they could be offered as managed services.
- Designed and built a hardware and software inventory system that helped the company pass a SOC 2 audit within a couple of months and replaced a paid alternative.
- Designed and built a highly available mail templating gateway that sends customer emails on behalf of Bitdefender products from 7 regional data centres on 4 continents.
- Worked on infrastructure and Kubernetes deployments across GCP, AWS and on-premises, and on migrating MongoDB, RabbitMQ, Redis and the Elastic Stack from VMs to Kubernetes, including replication, scaling and OAuth 2.0 authentication.
- Mentored engineers, took part in hiring and shared the on-call rotation.

Yonder · Software Engineer

Mar 2017 – Oct 2018
Iași, Romania

Worked on a data warehouse and GIS mapping project used by government entities.

- Built Angular frontend components.
- Mapped GIS, JSON and XML data through .NET and Node.js APIs.
- Dockerized the dev and staging environments to simplify local development and shorten build and release times.

Earlier: Junior Software Developer, Maxcode (Nov 2016 – Mar 2017) · Junior Software Developer, Yonder (Apr 2016 – Jul 2016)

Education: Master's in Distributed Systems (2018 – 2020) and Bachelor's in Information Technology (2014 – 2018), "Gheorghe Asachi" Technical University of Iași

Technologies: Go, TypeScript, Node.js · Kubernetes, Docker, Terraform, Helm, Kustomize, Argo CD, GitHub Actions · AWS, GCP, Cloudflare · MongoDB, PostgreSQL, Redis, Elasticsearch, RabbitMQ · Prometheus, Loki, Grafana
